PLISSE VERTICAL BLINDS JAPANESE PANEL BLINDS

Be unconventional and select an original alternative to interior sunshades and blinds. Pleated textile plisse blinds, vertical blinds or Japanese panel blinds will make your interior cosy, supplement it with a modern and elegant element, and in addition they will protect you against harsh sunlight and an undesirable appearance.

Plisse blinds provide shading also in very atypical windows. They are also used in places where other types of shading can't be installed. Japanese panel blinds and vertical blinds may be used in places which require shading of large areas or optical separation of large living areas.

For the shading of rooms we use fabrics with an excellent darkening effect, or non-flammable materials in office premises, and allergy sufferers appreciate the materials made of glass fibres.

ADVANTAGES AND BENEFITS

ELEGANT AND DECORATIVE ELEMENT FOR SHADING OF A MODERN INTERIOR,

WIDE CHOICE OF FABRICS OF VARIOUS COLOURS, DECORS, AND MATERIALS,

OPTIONAL ELECTRICAL CONTROL (JAPANESE PANEL BLINDS),

ATYPICAL DESIGN (PLISSE, VERTICAL BLINDS),

PLISSE

... a touch of intimacy.

Plisse is a blind made of a pleated fabric, which represents a modern and dynamic shading element. Plisse supplements the atmosphere and appearance of your interior.

Compared with a classic interior blind, plisse is unique for its feature allowing one to adjust the intensity of shading by changing the position of the fabric by putting the top or the bottom profile down or up.

Thus you create a shielding surface according to your ideas. You will surely be enchanted by the special design of plisse with two fabrics, which will change your interior according to your current mood, or double (honeycomb) plisse, which allows regulation of sunshine intensity and also helps to save energy. Plisse is suitable for classic, atypical and sky lights and conservatories as well. You can choose from a broad range of fabrics with various degrees of light transmittance, shading fabrics, fabrics with an aluminium layer, or fabrics with a nacreous finishing.

WIDTH [MM]		HEIGHT [MM]	
min.	max.	min.	max.
120	2 300	200	4 000

The stated values are limit values and differ according to the type of plisse.

Advantages and benefits

- An elegant element of the modern interior;
- a wide choice of plisse materials, colours, decors;
- fabrics with various degrees of light transmittance;
- blackout, reflecting, and PEARL fabrics;
- honeycomb fabrics;
- the option to combine two fabrics;
- plenty of atypical shapes.

VERTICAL BLINDS

... a touch of intimacy.

Vertical blinds will change your interior into a cosy place protected against excessive light and undesirable looks. Vertical blinds may be used for the shading of large areas and to divide large rooms.

Wide colour range and choice of materials provide optimum offer for your choice. If you need e.g. to shade a room, you can use fabrics with an excellent fully darkening effect. Non-flammable materials are popular in office premises. Materials containing glass fibres are appreciated mainly by allergy sufferers. We offer slats in the width of 89 mm or 127 mm.

WIDTH [MM]		HEIGHT [MM]	MAX. GUARANTEED SURFACE [m ²]
min.	max.	max.	
300	5 950	5 000	20

Advantages and benefits

- Decorative element shading the interior;
- wide choice of slats made of fabrics;
- the option to select non-flammable materials;
- atypical designs;
- guaranteed surface up to 20 m².

Control

It is possible to select from different positions of the panels: to the side of the control element, to the side opposite of the control element), in the middle, or at both sides (the so-called curtain).

Installation options

Vertical blinds can be mounted in the window opening (ceiling) or in front of the window opening (wall).

Atypical designs

We produce atypical designs for oblique blinds and blinds with two bars (plafond).

BLINDS IN TWO RAILS

JAPANESE PANEL BLINDS

... a touch of intimacy.

Japanese panel blinds create a decorative and tasteful element which forms an original alternative to sunshades and blinds. They serve not only as a protection against sunshine, but they mainly represent a modern and elegant accessory to an interior. A wide choice of colours and panel blinds of fabrics will certainly motivate you to create your original and unique combination.

Japanese panel blinds are created by individual textile panes, which move in two, three, four, or five-groove guide bars. They are used in spaces with large areas to be shaded, or in large living spaces which must be optically divided into smaller parts.

WIDTH [MM]		HEIGHT [MM]		MAX. GUARANTEED SURFACE [m ²]
min.	max.	min.	max.	
1 000	5 800	1 000	3 200	12,5

Note: For a height over 2700 mm it is necessary to consult the choice of fabric with the manufacturer; the maximum size of individual panels is given by the dimensional limit of individual types of fabrics; determination of the width of individual panels depends on the type of the carrying element, or the number of required panels and the total width of the installation.

Advantages and benefits

- Original design for complex shading regardless of the number of windows or leaves;
- an alternative to blinds and sunshades;
- profiles made of extruded aluminium in white or silver colour;
- wide choice of fabrics of various motifs and materials;
- optional electrical control.

Control

Installation options

Japanese panel blinds can be mounted in the window opening (ceiling) or in front of the window opening (wall).
